Styrofoam Sculpture

INSTALLATION SCULPTURES

By combining the assembled and installation sculptures techniques and strong steel frame inside for the durability and stability together with the strong composition of putty and a right color values we can create a decent and durable architectural sculpture.

FULL ROUND SCULPTURE

These sculptures are completely three dimensional and be viewed from different angles. These sculptures are generally not heavy on top and ensure the mass is uniformly distributed throughout the sculpture

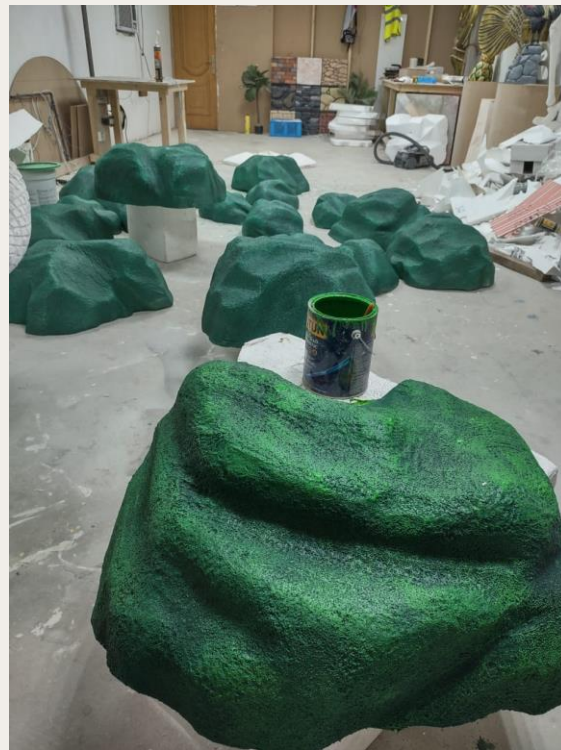

“The true work of art is but a shadow of the divine perfection.”

—Michelangelo

RELIEF SCULPTURE

In this technique the sculpture remain attached to the surface in which they are sculpted. It is a unique method which combines both two dimensional pictures and three dimensional sculpture

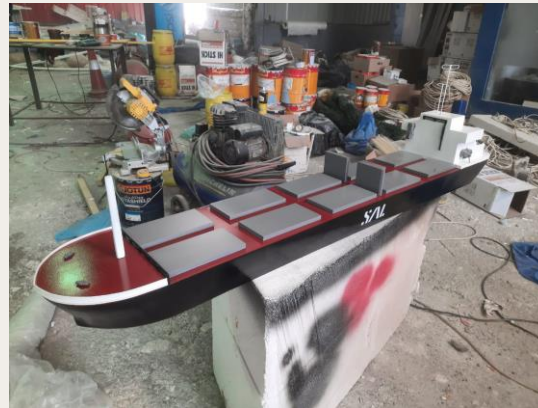

MODELING SCULPTURE

In this techniques the sculpture artists uses any different materials, puts them together to attained the desired sculpture

REALISTIC CARVING

Carving is a subtractive process of shaping a material by chipping and scraping away the surface of the material. In this process the outer forms of the sculpture are created and then the inner details of the sculptures are done
